

# SIP Advantage OfficeLine™ and OfficeTrunk®

## Take One Small Step Into Big IP Benefits

**Invested in a PBX, but tired of dealing with your local phone provider?**

**Looking for cost savings, but can't convert your entire office to IP phones?**

**Wanting to insure your customers can contact you, no matter what?**

The advantages of VoIP aren't exclusive to IP phones and big communications budgets. With SIP Advantage OfficeLine™ or SIP Advantage OfficeTrunk®, you can save money and gain flexibility – all while leveraging your current investments. By adding a single IP device to your network, you can use your existing Internet connection to bypass the costs, hassles, and service issues of your local voice provider.

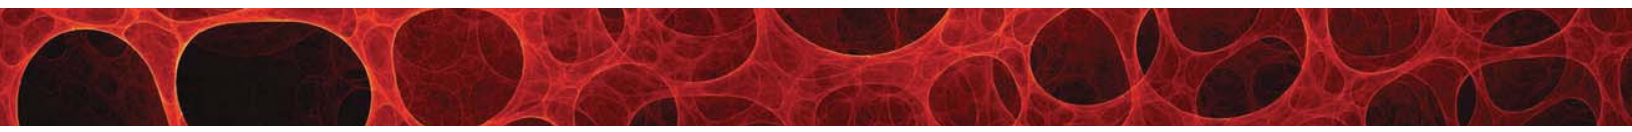

Concerned about maintaining your current service? The SIP Advantage® VoIP network delivers everything you need, and more. Both OfficeLine™ and OfficeTrunk® provide

- A single main telephone number for your site
- E911
- Unlimited local calling
- Caller ID
- Call Forwarding
- Operator Services
- Directory Assistance
- Extension dialing throughout your company
- Free Long Distance between locations
- Call Forward Not Reachable
- SIP Advantage® dashboard for feature control and administration

Does your current provider deliver all that?

### **SIP Advantage OfficeTrunk®**

OfficeTrunk® brings greater functionality and resiliency to your communications, while still taking full advantage of your existing PBX. Simply by adding an IAD to your network, we can provide a traditional PRI handoff to your PBX. Keep using all the functionality you have today, and add more – for less.

- Eliminates the fixed monthly cost of your existing PRI; use a single network to connect to the world
  - Fit your solution to your needs, not to the limitations of your local service provider's network
  - Insures customers can reach you through network-based routing options
  - Creates additional savings through reduced long-distance charges and increased productivity
- 

## SIP Advantage OfficeLine™

OfficeLine™ is very similar to Office Trunk®, but tailored to key systems and PBXs that require a standard POTS analog handoff. Instead of inserting an IAD in your network, we add an ATA; beyond that, all the functionality, resiliency, and financial benefits are the same. By adding this one small device to your network, we can deliver a traditional POTS handoff to your key system, and you can keep using all the functionality you have today, and more – for less.

- Eliminates the fixed monthly cost of your existing POTS lines; use a single network to connect your business to the world
- Take advantage of network-based routing options to insure that customers can reach you
- Take advantage of additional savings with reduced long-distance charges and increased productivity
